## Experience

### **SOFTWARE ENGINEER, NILENSO – 2013-PRESENT**

- Developed an internal product - wiki software for businesses.
- Worked with an online advertising firm, helping augment their software, and increasing test coverage and general code quality of their code base. There were some elements of machine learning, and headless ad detection.
- Worked with a retail startup, developing their prototype retail communications software, with a focus on delivering quickly while not compromising on quality.

### **SOFTWARE ENGINEER, C42 ENGINEERING – 2012-2013**

Worked on a surveying infrastructure for a prominent non-profit. A suite of three apps that allowed users to build surveys using a web application, collect and upload information from survey participants in various settings using a mobile application, and view reports on the dataset as a whole. Worked on all areas of the stack.

### **SOFTWARE ENGINEERING INTERN, SUCCESSFACTORS INC. – 2011**

Helped rewrite a *Report Builder* Flex app to HTML/Javascript. The app was front-end heavy, so most of my time was spent working on Javascript using an in-house framework called JUIC.

## Education

CMR Institute of Technology, Bangalore, India – Computer Science Engineering

## Skills

- Well-versed in Ruby, Ruby on Rails. Good working knowledge of Clojure.
- Can run an agile project reasonably well, including delivery, customer-facing communication, and project planning.
